

Dr. Dan's CortiBalm®

THE ONLY LIP BALM WITH 1% HYDROCORTISONE

Why coat your lips when you can heal them.

Dear Pharmacist,

CortiBalm® is the only lip balm available with 1% hydrocortisone. It was developed and first introduced by Dr. Dan Vidars, a board certified dermatologist in Massachusetts, for the treatment of severely chapped lips that resulted from the use of anti-acne medications. Since its introduction, **CortiBalm®** has quickly become dermatologists' answer to severe chapped lips associated with the use of certain anti-acne medications.

CortiBalm® utilizes the anti-inflammatory properties of hydrocortisone. Unlike many other lip balms that contain irritating chemicals, **CortiBalm®** doesn't irritate your lips and it works to heal them.

CortiBalm® is also effective for many other applications.

- Chemotherapy and radiation therapy patients often develop dry lips associated with their prolonged treatment. **CortiBalm®** is ideal for reducing the pain and discomfort associated with their dry lips.
- Auto immune diseases are often associated with dry, sensitive lips. **CortiBalm®** can be effective in reducing those symptoms.
- Sun and wind burn can often produce painful, dry, cracked lips. **CortiBalm®** is excellent for treating painful lips associated with either wind or sun exposure.
- Skin peels and skin resurfacing can result in painful, dry lips.
- Dermatologic disorders can often times be associated with dryness, peeling and cracking.
- Dry climates associated with low humidity can also result in dry, cracked lips.
- **CortiBalm®** is the only 1% hydrocortisone stick on the market. Great for the skin care aisle.
